

EI Residential Solar Solution

Quick Start Guide – EI ATS 200A

- All components must be installed and maintained by qualified personnel in accordance with applicable electrical codes.
- Always wear appropriate PPE and use insulated tools.
- Improper installation may cause damage not covered by the warranty.

Use this Quick Start Guide (QSG) in conjunction with the Tigo [EI Inverter](#) QSG. Detailed installation documentation for all Tigo products is available on the [tigoenergy.com Downloads](#) page.

Order of Installation

Install an EI system in this order:

1. Install TS4s and the Tigo Access Point (TAP) anytime before wiring the inverter.
2. Mount the ATS and connect it to the grid. To enable household power pending commissioning, use the ATS manual bypass feature described herein.

3. Mount the inverter and E-Stop rapid shutdown switch.
 4. Place the battery.
 5. Wire communications and power connections.
 6. Commission the system.
- You must install communications connections.**

Mount Enclosure

1. Locate the ATS enclosure:
2. In a well-ventilated, easily accessible location.
3. On a flat surface against a solid wall with $\leq 15^\circ$ tilt.
4. Sheltered from direct sunlight and precipitation.

- Ambient temperature should not exceed 50°C .
5. Away from antennas or other sources of strong electromechanical interference.
 6. Above potential flooding.

Connection Points

Power Connections

Use non-fine-stranded wire with ferrules. Torque terminals to 22.5Nm.

ATS to Load and Grid 1/0 – 4/0 AWG

EI Inverter to ATS 8 – 6 AWG

ATS to Generator (TSS-200A-US-G only) 4 – 1/0 AWG

Communications Connections

Inverter RS-485

ATS

ATS to Generator Start Switch

TSS-200A-US-G only

Manual Bypass Switch

Connects grid power to the home service panel while installing, servicing, or commissioning the system.

To manually bypass the ATS:

1. **Turn off TWO ATS breakers (service disconnect and inverter) and wait until no ATS LEDs show power.**
2. Plug the 3-pin jumper (in the Accessories bag) with jumped pins 1 and 3 into the *RSD+* and *RSD-* terminals.
3. Remove the black cover, turn the manual bypass switch to *GRID*, and restore power connections.

To reverse the procedure, turn off all power connections, remove and save the jumper, and turn on the system.

Do not manually turn the bypass switch back to INV.

The switch resets automatically.

For important detailed instructions, visit the Help Center [How to Bypass the ATS 200A](#) article.

Status Indicators

Symbol	Action	Description
 Grid	Continuous	Grid power on
	Off	Grid power off
 Communications	Continuous	Operating normally
	Flashing .5s on/.5s off	Error
 System Status	Continuous	Operating on-grid
	Flashing .5s on/.5s off	Operating off-grid w/battery and/or generator
 Fault	Off	Operating normally
	Flashing .5s on/.5s off 1s on/3s off	Fault present Loads > available power

Resources

Commissioning

Commission the system after double-checking all connections and installing the Tigo EI mobile app.

1. Turn on any disconnects and breakers between the grid and the ATS.
2. Ensure the E-Stop RSS initiator button is not engaged.
3. Turn the ATS *Service disconnect* and the inverter *DC disconnect* to ON.
If the inverter does not start, force-start the battery by removing the start button cover and pressing until the green leaf status LED flashes rapidly.
4. Ensure Bluetooth is enabled on your mobile device, open the Tigo EI app, and tap + to create a new system.
5. Open *Select Equipment*, tap *Scan*, and select *EI Inverter*. This listing should match the CCA MAC ID serial number labeled on the left side of the inverter.

6. Tap *Select Equipment*. Tap *Scan* to find EI components like the inverter and battery. Tap *Add* to configure components manually. The first component found is usually the EI Inverter or Cloud Connect Advanced (CCA).
7. After discovering or manually entering a component, tap *Add*. Connect to the customer's WiFi under *Internet Settings*. Drag down to refresh the network list.
8. Perform updates as needed. Symbols will indicate areas needing attention or completion. Tap *Inverter Settings*, select the *Grid Code*, configure *Advanced Options*, and tap *Save*.
10. In the *Advanced Options*, **tap "ATS" if an ATS is installed**. Skip this step if not.
11. Tap "+" to **add an ATS and scan the serial number** on the side of the ATS using your phone camera.
12. After adding the ATS, you can add a **"Generator"** if supported.
13. Complete the system set up in the Tigo EI App. For detailed instructions, visit the [tigoenergy.com Help Center](#).
